Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 59, Application US/09123912A

Patent No. 6312695

GENERAL INFORMATION:

APPLICANT: Wang, Tongtong

TITLE OF INVENTION: COMPOUNDS AND METHODS FOR THERAPY OF LUNG CANCER

FILE REPERENCE: 2101213.455C1

CURRENT APPLICATION NUMBER: US/09/123,912A

PRIOR PRING APPLICATION NUMBER: 09/040,802

PRIOR FILING DATE: 1998-03-18

NUMBER OF SEQ ID NOS: 114

SOFTWARE: Patentin Ver. 2.0

LENGTH: 649

Patent No. 6630334

GENERAL INPORMATION:
TITLE OF INVENTION: ISOLATED HUMAN KINASE PROTEINS, NUCLEIC
TITLE OF INVENTION: ACID MOLECULES ENCODING HUMAN KINASE PROTEINS, AND USES
TITLE OF INVENTION: THEREOF
FILE REFERENCE: CL001067

CURRENT APPLICATION NUMBER: US/09/751,389

CURRENT APPLICATION NUMBER: 2001-01-02

NUMBER OF SEQ ID NOS: 8

SOFTWARE: FASISEQ for Windows Version 4.0

SEQ ID NO 3

LENGTH: 786431
                                                                                                                                                                                                                                                           APPLICANT: GAN, Weiniu

The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and

Nucleic acid comprising fragment of chemically modified gene, useful for diagnosis and treatment of diseases associated with abnormal cytosine methylation.

The present invention relates to chemically modified DNA sequences of signal transduction associated genes. The DNA sequences are chemically modified using a solution of bisulphite, hydrogen sulphite or disciplinte. Also disclosed are oligonucleotides and/or PNA oligomers for detecting the cytosine methylation state (CpG islands) of these genes, and a method for the disgnosis and/or therapy of genetic and epigenetic parameters of genes associated with signal transduction. The genomic DNA can be obtained from cells or cellular components which contain DNA, e.g. cell insue embedded in paraffin such as tissue from eyes, intestine, kidney, brain, heart, prostate, lung, breast or liver, histologic object slides, and all their possible combinations. The sequences of the invention are useful for the diagnosis and therapy of diseases associated with signal transduction e.g. solid tumours and cancer. ABK31158-ABK31545 represent chemically pretreated genomic DNA sequences of different genes associated
                                                                                                                                                                                ö

The invention relates to a nucleic acid comprising a sequence of at least 18 bases of a segment of chemically pretreated DNA of genes associated with cell signaling. The activity of the modified sequences of the invention may be described as cytostatic. The object of the invention is to provide the chemically modified DNA of genes associated with cell signalling, as well as oligomuclectides and/or PNA-oligomers for detecting cytosine methylations, as well as a method which is particularly suitable for the diagnosis and/or therapy of genetic and epigenetic parameters of genes associated with cell signalling. The chemically modified DNA provided by the invention is useful for diagnosis and therapy of diseases such as social tumours and cancer. The sequences given in records ABL70111-ABL70626 represent chemically pre-treated genomic DNA's of genes associated with cell signalling. Note: The sequence data for this patent is not represented in the printed specification, but is based on sequence information supplied by the European Patent Office
                                                                                                                                                                                                                                        9482

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid rebuxaemia, Alzheimer's disease, Alz, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention

The present invention relates to chemically modified DNA sequences of signal transduction associated genes. The DNA sequences are chemically condition of bisulphite, hydrogen sulphite or disulphite.

Also disclosed are oligonuclectides and/or PNA oligomers for detecting the cytosine methylation state (CpG islands) of these genes, and a method contained state associated with signal transduction. The genomic DNA can be contained from cells or cellular components which contain DNA, e.g. cell cines, biopsies, blood, sputum, stool, wine, cerebral-spinal fluid, tissue embedded in paraffin such as tissue from eyes, intestine, kidney, brain, heart, prostate, lung, breast or liver, histologic object slides, and all their possible combinations. The sequences of the invention are useful for the diagnosis and therapy of diseases associated with signal transduction, or their complementary sequences. Note: The sequence of the fivention are chemically pretreated genomic DNA sequences of different genes associated with signal transduction, or their complementary sequences. Note: The sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
Human; signal transduction associated gene; cytosine methylation state; CpG island; signal transduction associated disease; solid tumour; cancer; antitumour; cytostatic; mutant; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Oligonucleotide for diagnosis and therapy of diseases associated with signal transduction e.g. cancer, comprises chemically modified genomic sequences of genes associated with signal transduction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           0;

The invention relates to a nucleic acid comprising a sequence of at least seases of a segment of chemically pretreated DNA of genes associated with cell signalling. The activity of the modified sequences of the invention may be described as cytostatic. The object of the invention is to provide the chemically modified DNA of genes associated with cell signalling, as well as oligonate for PNA-oligomers for particularly suitable for the diagnosis and/or therapy of genetic and epigenetic parameters of genes associated with cell signalling. The epigenetic parameters of genes associated with cell signalling. The chemically modified DNA provided by the invention is useful for diagnosis and therapy of diseases such as solid tumours and cancer. The sequences given in records ABL/0111-ABL/0626 represent chemically pre-treated genemic DNA so f genes associated with cell signalling. Note: The sequence data for this patent is not represented in the printed sequence data for this patent is not represented in the printed sequence information supplied by the

The invention relates to recombinant carcinoma associated (CA) nucleic acid sequences from mouse and human (ADA01482-ADA03094), and to recombinant carcinoma associated proteins (CAP) encoded by them. The invention also encompasses expression vectors and host cells comprising a CA nucleic acid, a polypeptide (especially an antibody) that specifically binds to the protein, and a biochip comprising CA nucleic acid or fragments thereof. The sequences of the invention were identified using oncogenic trans-acting viral genes, meaning that cancer incidence is a trandom. Many of these do not carry transduced host oncogenes or compensity transduced host oncogenes or direct consequence of the effects of provintal integration into host corcinoma (especially breast cancer, prostate cancer, lymphoma or leukaemia) or a propensity to carcinoma by determination of the sequence of a CA gene, or by determination of CA gene expression in particular tissues. CA nucleic acids, proteins and antibodies are also useful as therepoutic agents and in screening and evaluating drug candidates. The present sequence represents a specifically claimed human CA nucleic acid sequence of the invention. Note: The complete sequence data for this control of format dianot format directly from a proper in the printed specification, but was obtained in all performing forms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            36015 TCAAGCAAGTGAAAAGACAACCCACAGAATGGGGGAAAATATTTGCAAGTCATGTATTGG 35956

                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a novel recombinant nucleic acid comprising a nucleotide sequence selected from any of the 60 sequences fully defined in the specification. A polymucleotide of the invention has cytostatic activity, and may have a use in gene therapy, or in a vaccine. The recombinant nucleic acids and polypeptides are useful for treating carcinomas, e.g. lymphomas, another neoples and adenocarcinoma, and sarcommas. The present sequence represents a human gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                  recombinant nucleic acid, useful for treating carcinomas, lymphomas,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 72332 BP; 16680 A; 18843 C; 19431 G; 16654 T; 0 U; 724 Other;

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) anno acid sequences given in AAM92170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polymucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or delactions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polymucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the concleic acids into a host cell and culturing the used to prevent, (I) proteins and polymucleotides may be used to prevent, (I) diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic antigen genomic sequences from the present invantion. AAK54942 to AAK54950 and AAM82169 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      4021 TCAAAAAGTGAAAAGACAACTCACAGAAAGGAAGAAAATATTTGCAAATCATGTATCTG 3962
                                                                                                                                                                                                                                                                                                                         Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1 TCAAGAAAGTGAAAAACACAAACCCGCAGAAGCAATAAAAATGTCTGTAAGTCATGTATCCG

```

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis.

Disclosure; SEQ ID NO 32543; 3071pp + Sequence Listing; English.

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen [I]

amino acid sequences given in AAK92170 to AAK91921. (I) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)

     proteins and polymucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polymucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the nucleic acids into a host cell and culturing the cell to express the diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK64703 concers metastases of haematopoietic antigen genomic sequences from the present invention. AAK64912 to AAK87691 and AAM82169 ceptences to the present invention of the present invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         18972 rcaagaaagricaaaagacaaccraragaarggcaraaaaararrrigraarcarararcrg 18913
                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                  The present invention relates to a method (M1) for determining a predisposition for or the occurrence of neurodegenerative disease in a subject. The method comprises detecting in a target nucleic acid obtained from the subject the presence or abone or an allelic variant of one or more polymorphic regions of one or more genes selected from upp. (Urokinase plasminogen activator), SNCG (gamma-synuclein), IDE (insulinlypase), and TNRRSF6 (Thmour Necrosis Factor Receptor-SF6), where the presence of at least one of the allelic variant of one or more polymorphic regions is indicative of a predisposition for or the occurrence of neurodegenerative disease. The genes are all located on chromosome 10. M1 is useful for determining a predisposition for or the occurrence of and for treating neurodegenerative disease, particularly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to a method (M1) for determining a predisposition for or the occurrence of neurodegenerative disease in a subject. The method comprises detecting in a target nucleic acid obtained from the subject the presence or absence of an allelic variant of one or more polymorphic regions of one or more genes selected from UPA (Urokinase plasminogen activator), SNCG (gamma-synuclein), IDE (insulindegrading enzyme), KNBLI (Kinesin-like protein 1), LIPA (lysosomal acid lypase), and INFRSF6 (Tumour Necrosis Factor Receptor-SPG), where the presence of at least one of the allelic variant of one or more polymorphic regions is indicative of a predisposition for or the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                                                                                                       Determining a predisposition for or the occurrence of neurodegenerative disease, e.g. Alzheimer's disease by detecting in a target nucleic acid the presence or absence of an allelic variant of one or more polymorphic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                occurrence of neurodegenerative disease. The genes are all located on chromosome 10. M1 is useful for determining a predisposition for or the occurrence of, and for treating neurodegenerative disease, particularly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               104723 TCAAGAAAGTGAAAAGACAACCTATAGAATGGCATAAAATATTGTAAATGTAATATCTTATTG 104782
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to a method (M1) for determining a predisposition for or the occurrence of neurodegenerative disease in a subject. The method comprises detecting in a target nucleic acid obtained from the subject the presence or an allelic variant of one or more polymorphic regions of one or more genes selected from UPA (Urokinase plasminogen activator), SNGS (gamma-synuclein), IDE (insulindegrading enzyme), KNSII (Kinesin-like protein 1), LIPA (lysosomal acid lypase), and TNRRSF6 (Tumour Necrosis Factor Receptor-SF6), where the presence of at least one of the allelic variant of one or more polymorphic regions is indicative of a predisposition for or the occurrence of neurodegenerative disease. The genes are all located on chromosome 10. M1 is useful for determining a predisposition for or the occurrence of, and for treating neurodegenerative disease, particularly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  detection; diagnosis; antisense therapy; gene therapy; ss.

The present invention describes primer sets for synthesising 5602 full-
length cDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-dr primer and an oligonuclectide comprises one of the 5602
complementary strand of a polynucleotide which comprises one of the 5602
oligonucleotide comprises at least 15 nucleotides; or (b) a combination
of an oligonucleotide comprises at sequence complementary to the
complementary strand of a polynucleotide which comprises a 5'-end
complementary strand of a polynucleotide which comprises a 5'-end
complementary strand of a polynucleotide which comprises a 5'-end
complementary strand of a polynucleotide which comprises a 5'-end
complementary strand of a polynucleotide which comprises a 5'-end
complementary strand of a polynucleotide of sequence, where the
complementary strand of a polynucleotide comprises a 1-end sequence, where the
coligonucleotide comprises at least 15 nucleotides and the combination of
the 5'-end sequence/3'-end sequence is selected from those defined in the
copperation of the primer sets can be used in antisense therapy and in
copperation and/or diagnosis of the abnormality of the proteins encoded by
the full-length cDNAs. The primers are also useful for the full-length
copperation and/or diagnosis of the abnormality of the proteins encoded by
the full-length cDNAs. The primers allow obtaining of the full-length
copperation and/or diagnosis of the abnormality of the primer sets and
copperation and/or diagnosis of the abnormality of the primer sets
copperation and/or diagnosis of the abnormality of the primer sets
copperation and/or diagnosis of the abnormality of the primer sets
copperation and/or diagnosis of the abnormality of the primer sets
copperation and sequences; and AAH13623 to AAH13622 represent
copperation and sequences; and AAH13629 to AAH3622 represent
copperation and sequences; and AAH13629 to the primer sets in the exemplification of the

```

```
Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs.
                                                                                                     Ota T, Isogai T, Nishikawa T, Hayashi K, Saito K, Yamamoto J;

The present invention describes primer sets for synthesising 5602 full
[1] an oligo-dr primer and an oligonuclectide complementary to the

[2] complementary strand of a polynuclectide comprises one of the 5602

[3] an oligonuclectide comprises at least 15 nuclectides; or (b) a compination

[3] complementary strand of a polynuclectide which comprises one of the 5602

[4] an oligonuclectide comprising a sequence complementary to the

[5] complementary strand of a polynuclectide which comprises a 5'-end

[6] complementary strand of a polynuclectide which complementary to the

[5] complementary strand of a polynuclectide which complementary to the

[6] complementary strand of a polynuclectide which complementary to a

[7] complementary strand of a polynuclectide which complementary to a

[7] complementary strand of a polynuclectide which complementary to a

[8] complementary strand of a polynuclectide of sequence complementary to a

[8] complementary strand of a polynuclectide of sequence, where the

[8] complementary strand of a polynuclectide of the abnormality of the primers are also useful for the complement of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AMH3632 represent thuman amino acid sequences, and AMH3632 to AMH3632 represent thuman amino acid sequences, and AMH3632 to AMH3632 represent the primers and a polynuclectide of the polyn Claim 8; SEQ ID NO 17007; 2537pp + Sequence Listing; English.

Clones are derived from the bovine BAC library CHORI-240
(http://www.chori.org/bacpac/bovine240.htm). For BAC library
availability, please contact Pieter de Jong (pdejong@mail.cho.org).
Clones may be purchased from BACPAC Resources
(http://www.chori.org/bacpac/ordering information.htm). This work
was undertaken as part of the International Bovine BAC Mapping
Consortium (IBBMC) by GSIRO Livestock Industries, Australia and the
British Columbia Genome Sciences Centre, Canada.

Clones are derived from the bovine BAC library CHGRI-240

(http://www.chori.org/bacpac/bovine240.htm). For BAC library

availability, please contact Pieter de Jong (pdejong@mail.cho.org).

Clones may be purchased from BACPAC Resources

(http://www.chori.org/bacpac/ordering information.htm). This work

was undertaken as part of the International Bovine BAC Mapping

Consortium (IBBMC) by CSIRO Livestock Industries, Australia and the

British Columbia Genome Sciences Centre, Canada.
